## Elevator Pitch

I'm Karol Ochoa, a software developer. I have a masters degree in data mining. I have three years of experience in this field, working as a consultant for companies of different sizes. During this time. I discovered it's possible to reduce the time of queries greatly by implementing different tactics, such as the optimization of code or restructuring of processes, wich allow take advantage better the time and optimizing the report generation. In the last year, I have worked with more than twenty customers who were presented a decrease of 34% in time of report creation, the all thanks to aggregated deployments. To get a clean result is necessary to break down all of the existing processes to discard what already no use to us and deploy new solutions with the objective of

reducing the time and cleaning the obtained information. When are you available for a proof?
